WHY YOU SHOULD RETROFIT YOUR COMPRESSOR VENT PIPING

Rexarc's piping systems work better than ever. However, this new update allows for all safety relief valves to flow fully at the same time without restriction and aligns to NFPA 55 section 15.4.1.3.2.6 (A).

WHO CAN BENEFIT FROM RETROFIT VENT PIPING?

All acetylene plant owners who purchased Rexarc equipment before 2014 can retrofit their compressor vent piping. (This design update has been integrated in all compressors manufactured after 2014, in order to align with recommended best practices.)
